# SUGGESTED TIGHTENING TORQUE VALUES FOR NONFERROUS THREADED FASTENERS

This table is offered as the suggested maximum torquing values for threaded products and is only a guide. Actual tests were conducted on dry, or near-dry products. Mating parts were wiped clean of chips and foreign matter. A lubricated bolt requires less torque to attain the same clamping force as a non-lubricated bolt. All values shown on this chart except for nylon represent a safe working torque; in the case of nylon only, the figures represent breaking torque.

| BOLT SIZE | 18.8 STAINLESS STEEL | BRASS | SILICON BRONZE | ALUMINUM 2 024-T4 | 316 STAINLESS STEEL | MONEL | NYLON |
